

# iPhone Users reaction towards Android Tweets

Nikitha Lakmarapu

School of Computer Science and Information Systems, Northwest Missouri State University

## Introduction

- The goal of this project is to find the reactions of iPhone users for the tweets related to Android account.
- Finding Compound sentiment analysis for iPhone Users Reply done to Android account Tweets.

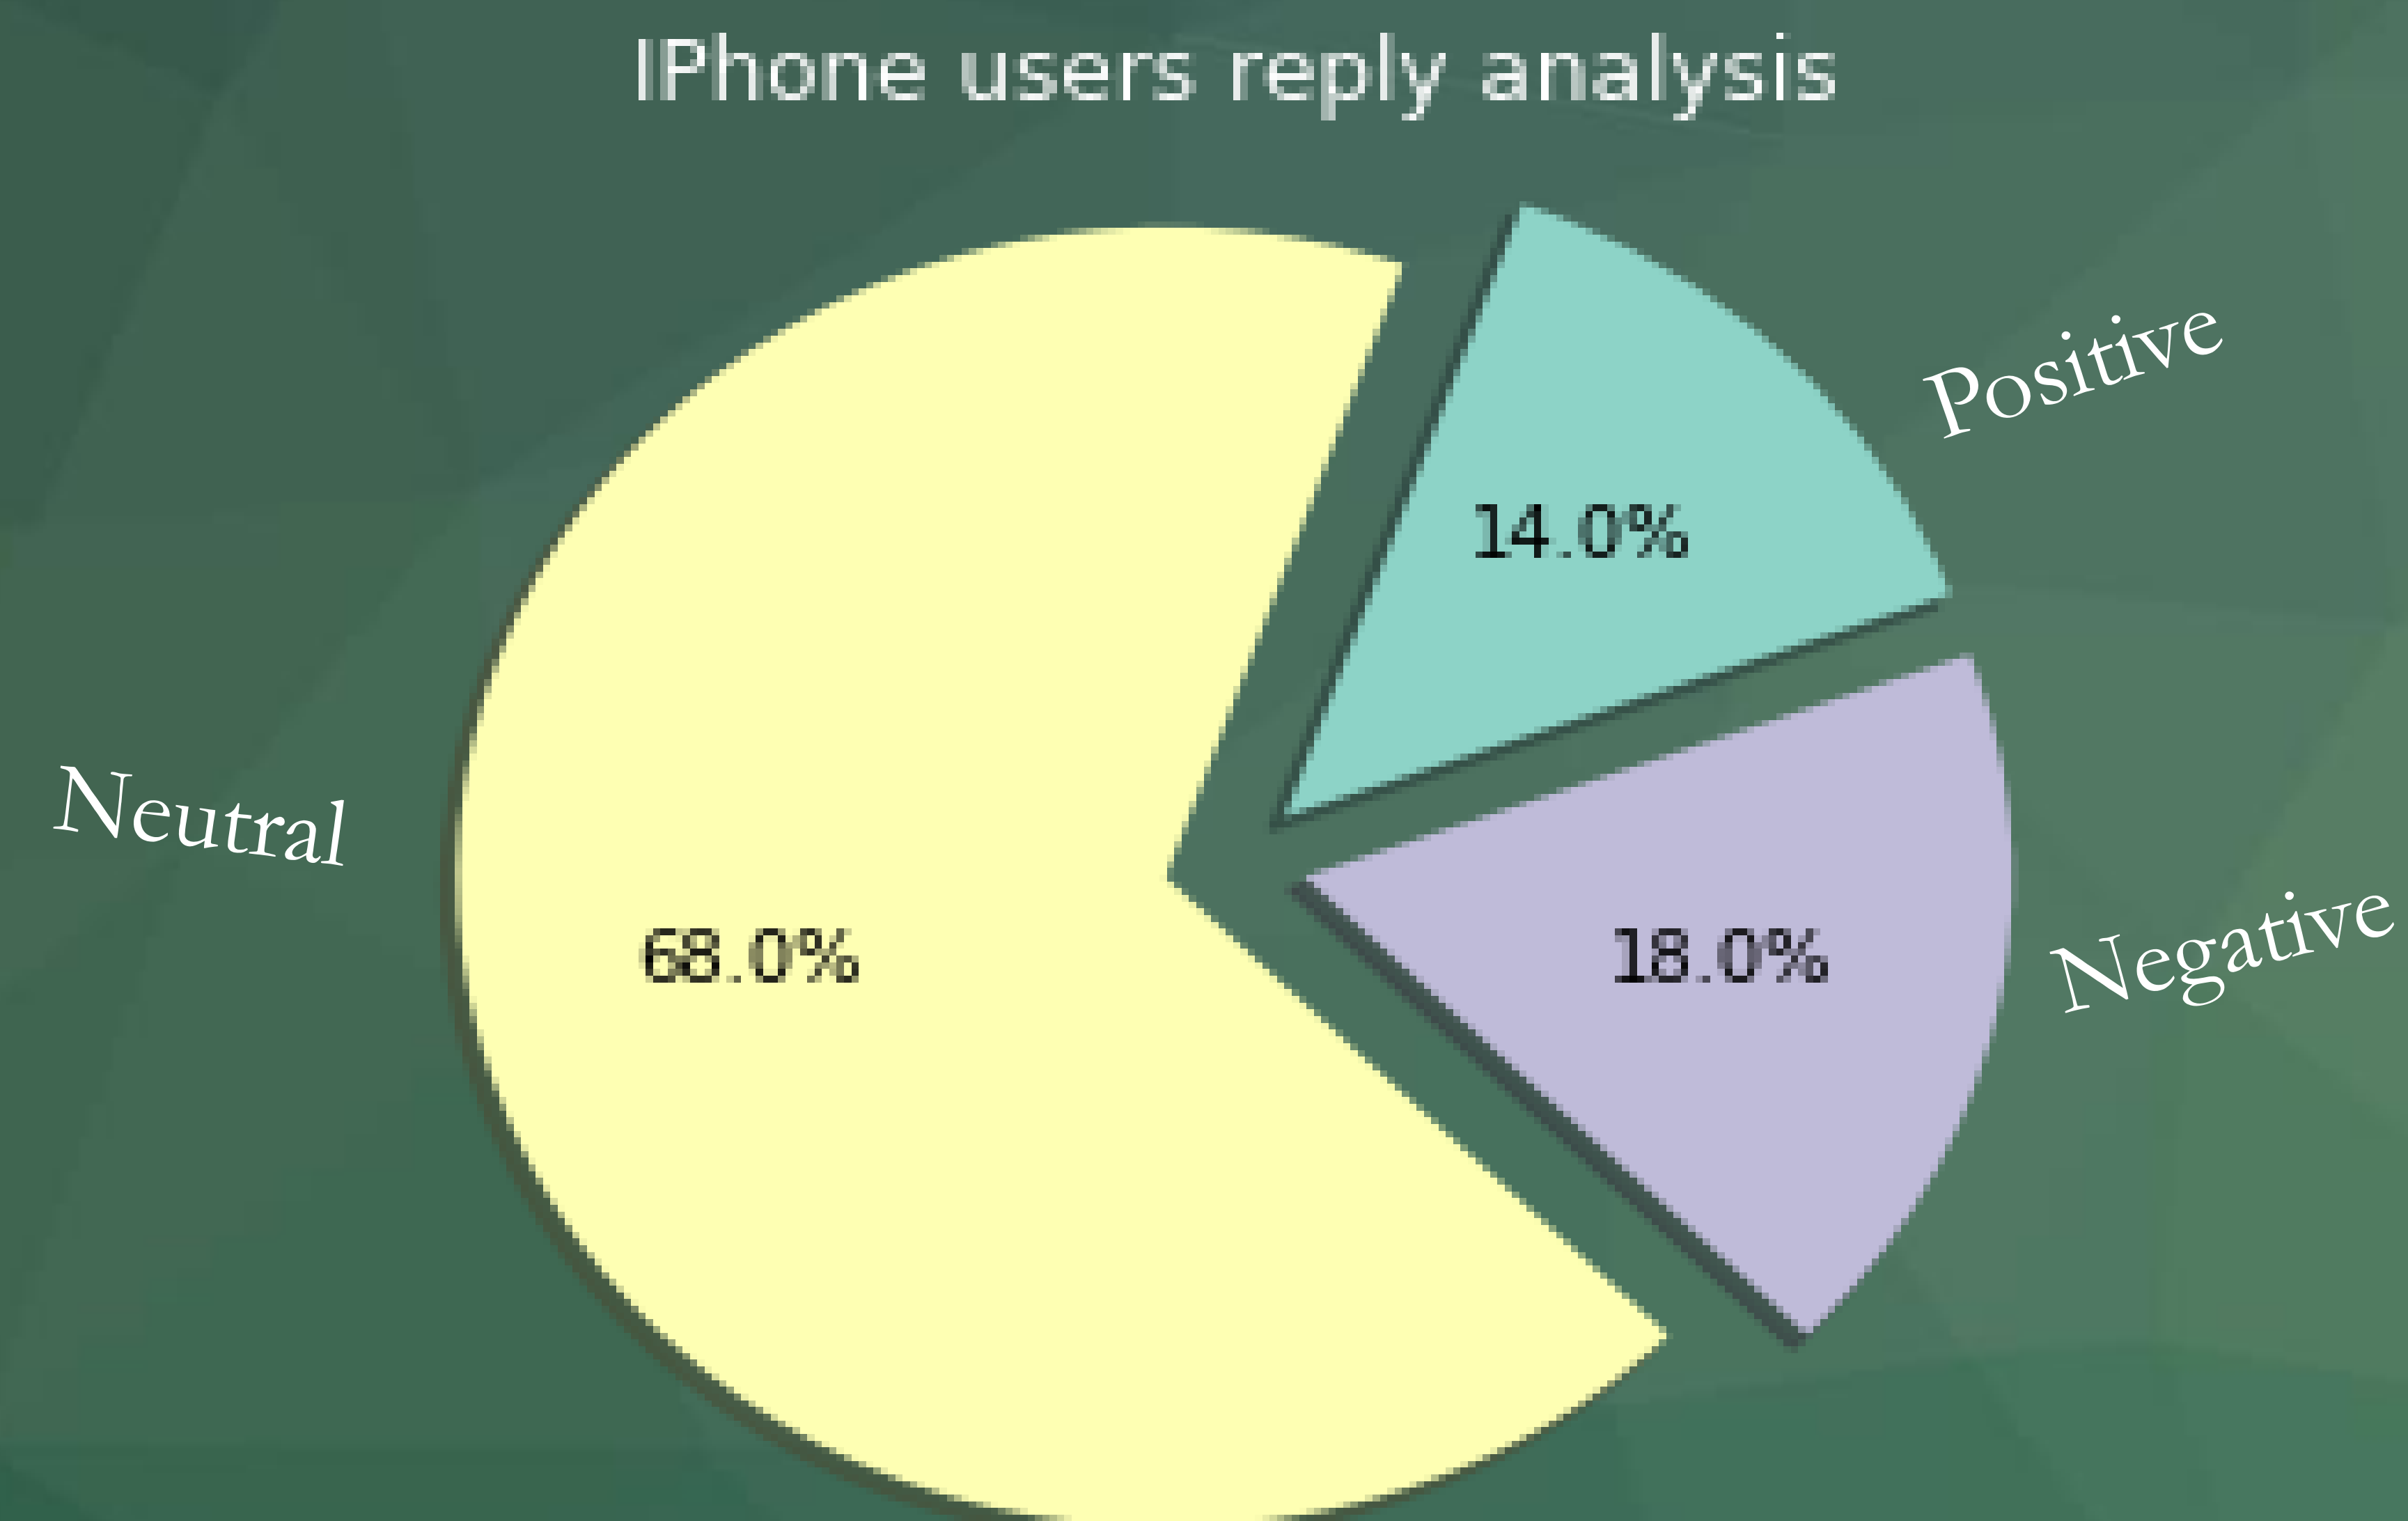

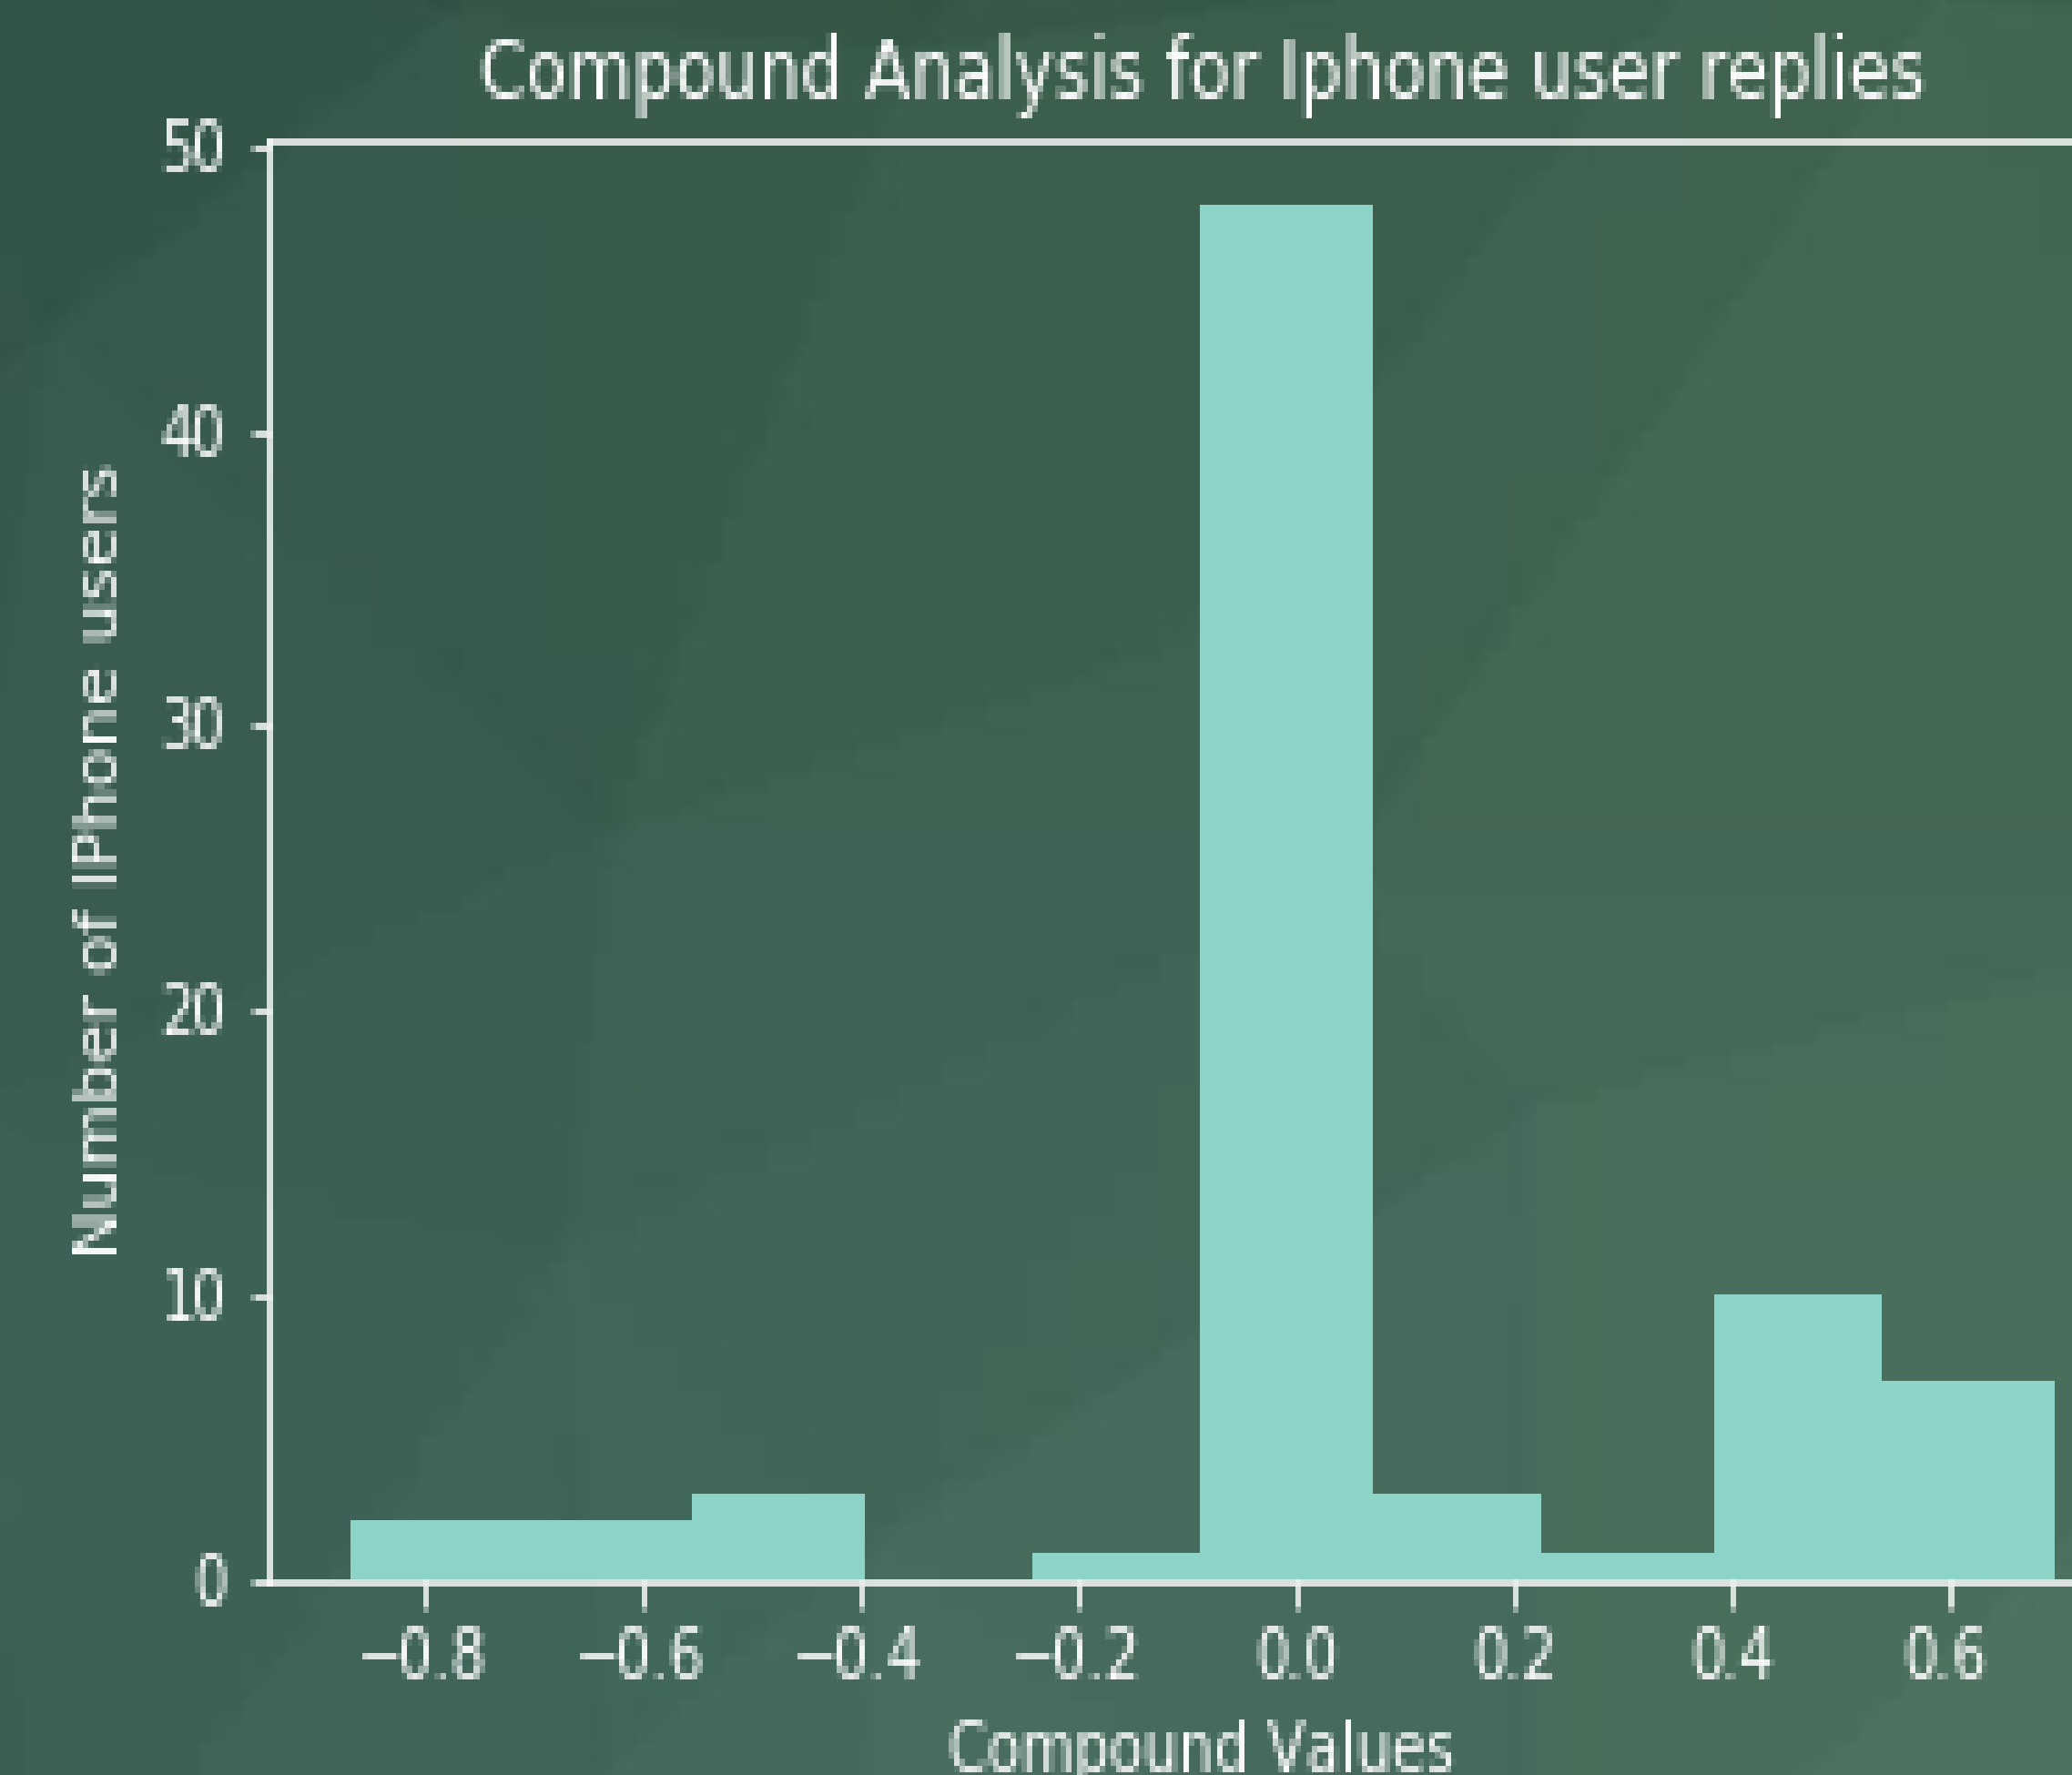

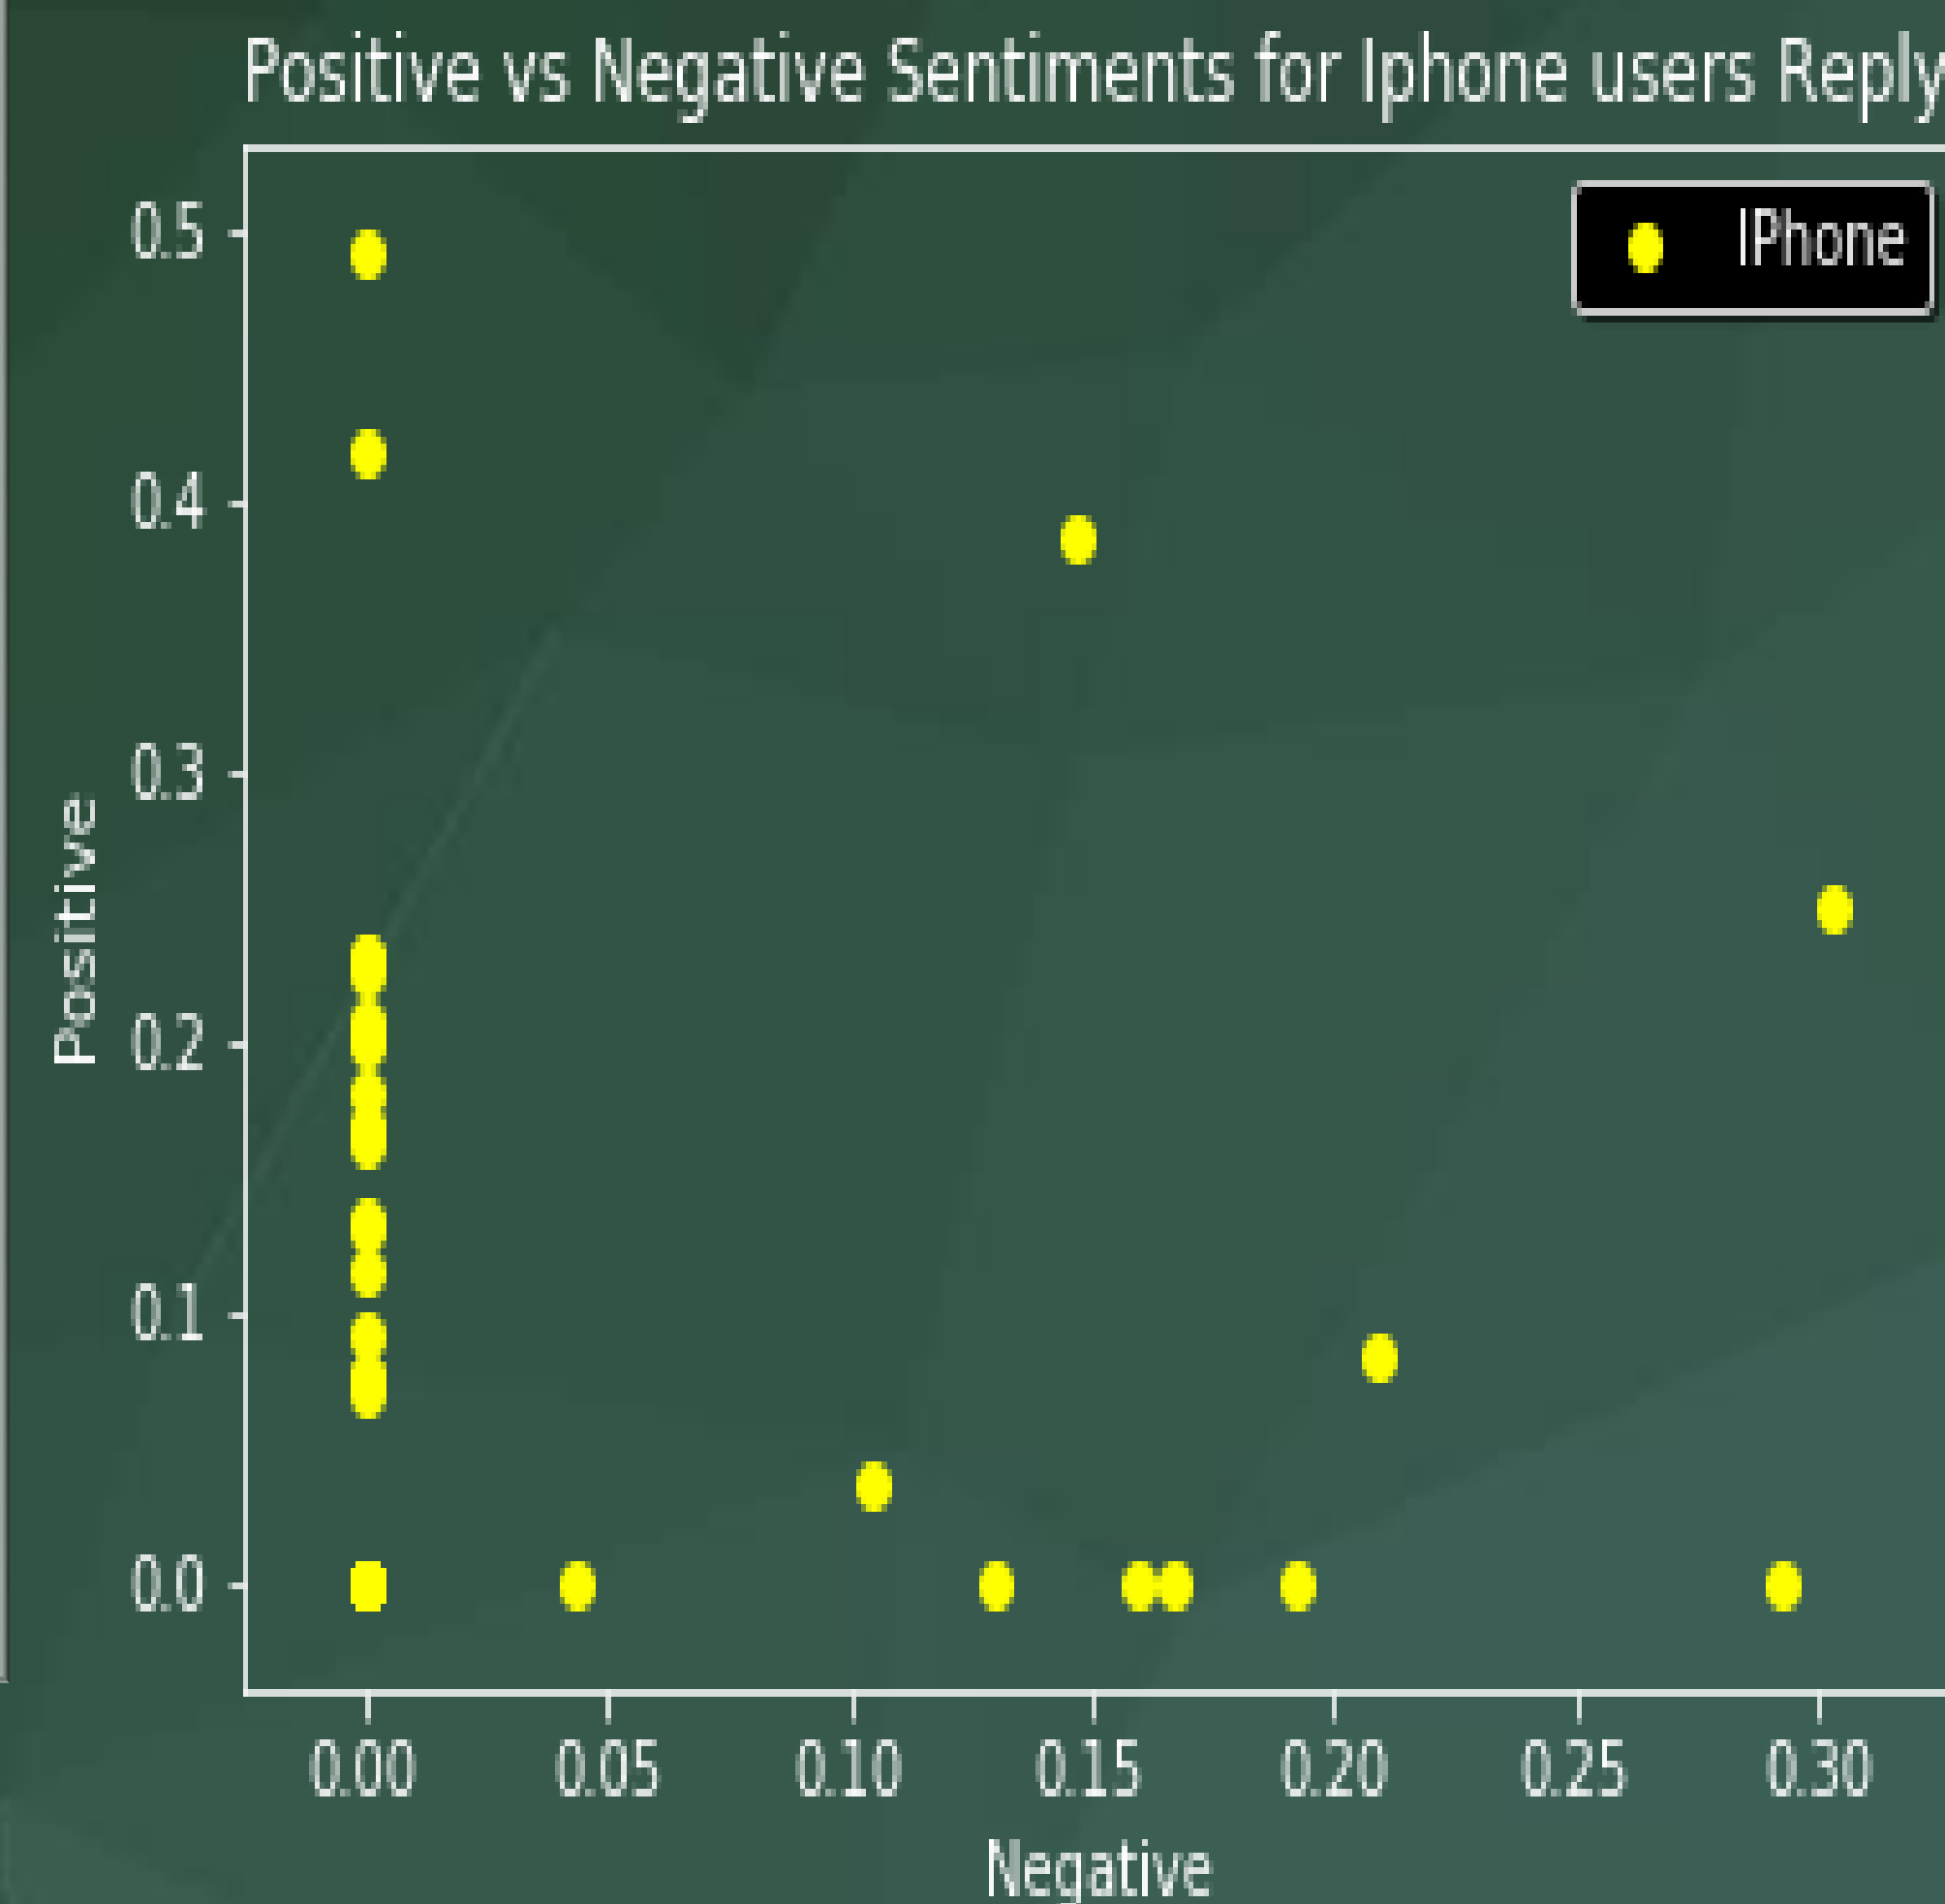

## Methods

- I used Python Tweepy module to grab tweets for Android Account.
- I also used Twitter API for cursor which is used to grab information through redirected pages.
- I grabbed information from 2 pages which contains about 200 replies for tweets of Android account.

## Additional Resources

- API module: [http://docs.tweepy.org/en/v3.5.0/cursor\\_tutorial.html](http://docs.tweepy.org/en/v3.5.0/cursor_tutorial.html)
- Tweepy documentation: <http://docs.tweepy.org/en/v3.5.0/>

## Results

## Conclusions

- Looking back to the Question:” Are iPhone users positive when tweeting about the android tweet?” Based on the results I can make some assertions.
- iPhone users are not so positive towards tweets done in Android account which resembles that they are not much satisfied with tweets.
- Approximately 85% of iPhone users are neutral and negative when there is a tweet in Android account.
